

Creating Horizontal Alignments

Design Manual
Chapter 40
Design Survey
Specifications

Originally Issued: 12-30-11

Horizontal alignments should be created for all paved roadways within the survey limits.

All alignments should be created and stored in GEOPAK.

The linework should be plotted into the Field_TOPO_0100 model of the MicroStation file using the IDOTSurvey Design and Computation Manager.

All tic marks and text related to stationing and curve data should be plotted into the Field_TXT_0100 model.
